# HW-04-Question

Group: NOIDEA

1. In the class we have the range of B_n, but it is still too wide. Can we narrow the range down?
2. About 4.10, I don't find a rigorous proof of that we change every bit of a sequence, getting a number of sequences , then do the same things to those sequences we can get $\{0,1\}^d$
3. I still use some descriptive words to prove a conclusion. I have difficulty changing them into formal derivation.
